

Facility Migration Plan

Welcome to the Net Health family!

From kickoff to go-live, our professional implementation team expertly guides the project and your team to success. This implementation plan will ensure a smooth transition to our system. We look forward to working with you.

Introduction to Net Health

- A migration ambassador will reach out to you to begin discussions about your migration plan.
- In most cases, you will be asked to sign a simple addendum to your current contract that will reflect your use of the Net Health Therapy product. Signing this addendum is the first step in the overall migration process and will allow us to plan and schedule your migration.
- You will be assigned a go-live date at the time of your contract addendum being signed.
- Existing interfaces and applicable imports/exports (e.g. ADT, DFT, billing, payroll, GL, etc.) will be established with Net Health tools and methodologies.

Project Initiation 60-90 days prior to go-live

- Project kickoff call will occur to discuss the process and answer any questions.
- After kickoff you will begin your configuration and setup. Customized discovery will be performed to learn about your organization and any unique workflows.

Build, Train, and Implement 30 days prior to go-live

- Role-based training will begin immediately following kickoff and will include self-paced learning modules and live virtual training sessions.
- All active clinical patient data will be imported into the Net Health application.
- Access to the historic data from your Casamba system will be available in read-only format so that you can retrieve it for audits, ADRs, or review.
- When applicable, clearinghouse transition will be seamless with no service interruption.

Go-Live Day 0

- Your Net Health application will be activated, and users will begin accessing the system.
- You will continue to be supported post go-live through your first month end close.

Our experienced team will carry the bulk of the implementation so that your organization can do what you do best: **take care of patients.**

Our goal is to minimize any productivity loss and quickly get clinicians treating patients.
